                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sering protease negatively associated with epithelial cell malignancy. The NSS1 anino acid sequence was deduced from a cDNN colone (AAT4411) isolated from xddlation-transformed human mammay spithelial cell lime, 788-30. The polyspitide can be produced in transformed host cells. It provides a diagnostic marker for breast, cervical and prosease carcinoma and may also be used in the treatment of these diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         continuous petient invention relates to a new method for assessing whether a content petient is afflicted with owarian cancer: The method involves comparing the expression level of a marker in a patient sample and the normal level co of expression of the marker in a ontrol non-ovarian cancer sample, where the marker is selected from 50 cancer markers described in the specification. The method of the invention is useful in diagnosing or passible, and the restricted by the presence of cancer as early as content and the restricted by the presence of cancer as early as passible, and the restricted by the presence of cancer as early as conserved and the restricted by the presence of cancer as early as conserved and the restricted by the presence of cancer as early as a cancer. The cancer markers may be used in the management and treatment of e.g. brain and central nervous system disorders (e.g. bacterial or viral menightis or brain heritations), in the cancer markers of the partitions of the markers of the partitions of control of the control of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to the isolation of novel human protesses, and the nucleic acids encoding then. The sequences of the invention are useful for treating diseases and disorders such as the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lung), immune-related diseases and disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 6; Fig 2K; 313pp, English.

The invention relates to 21% novel human ovarian antigens (AB241054-AB24228) and to coDNs encoding them (AB25411)-AB262805), and also encompasses polypeptides 90% identical and polymuclactides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and hose cells comprising human ovarian antigen polymuclactides, antibodies separate human posticus entipsignosis of the reverse properties of the condition of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ovariah cancer, besst cancer; tumour; reproductive system disorder; infactility, prespancy disorder; amountation; polyvystic ovary syndrome; pross, ovarian cyst; dysmanorinosa; endocrine disorder; infaction; inflammatory condition; immune disorder; blood disorder; cardiovascular disorder; respiratory disorder; neurological disorder; cardiovascular disorder; urinary system disorder; drug creening; gastroinfestial disorder; urinary system disorder; drug creening; gene blarapy; chromosome maphing; forensic analysis; encorp gene blarapy; chromosome maphing; forensic analysis; encorp in a constraint of the constraint of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            reolated mucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of concer (e.g. ovarian concer), immune disorders, cardiovascular disorders and

Comparison the present invention describes an antibody that binds to a human correction (I) selected from: PROMSI; PROLIS; PRO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antibodies specific for PRO polypeptides, used to diagnose and
the growth of tumors in mammals, and to identify inhibitors of
polypeptide activity or expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 61; Fig 24; 226pp; English.

```
The present invention describes nucleic acids encoding PRO polypeptides cardiovascular, endothelial or angiogenesis and creating diagnosing a cardiovascular, endothelial or angiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with the cinappropriate PRO expression such as excitovascular, andothelial or angiogenic disorders in mammals (e.g. atherosciacular, andothelial or angiogenic disorders in mammals, e.g., atherosciacular, andothelial or angiogenic disorders in mammals, e.g., atherosciacular, andothelial or cardiac hypertrophy). For example, the nucleic acids (NCs) and vectors containing them and the PRO polymeptide may be used to treat disorders containing them and the PRO polymeptide may be used to treat disorders containing them and the PRO polymeptide may be used to treat disorders and AA2138 to AAA2135 represent nucleotide and protein sequences used in the exemplification of the present throation.
                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

The transmembrane and receptor PRO processins can be used for screening of potential peptide or small molecule withhibitors of the receptor PRO processins and multicerides treesptor/land interactions. The polypspitides and multicerides sequences encoding than have various industrial applications. Including uses as proceeding that the various industrial AM371145 to AAA77107 represent the processing process and hyperdisation probes used in the isolation of the PRO polypspitides and the process in the molecular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New mammalian DNA sequences encoding transmembrane, receptor or secreted PRO polypeptides, useful for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions
                                                                                                                                                                                                                                                                                                                                         Sequence

These were derived from expressed sequence toga (BSTs) from the organism of interest. They can be used in disposition to assess biodiversity and for nutritional purposes. The present sequence is a

                                                                                                                                                                                                                                                                                                            Gao W,
                                                                            The present invention relates to secreted and transmembrane proteins. These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of anti-sense BNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The muclair acids may also be used in gene therapy.

Its amino acid sequence was deduced from a cDNA clone (hAMT9788) obt. from a human lung library. Recombinant protease can be produced in transformed or transfered protaryotic (partic. R. coil) or esharyotic (partic. AVI210) best cells. It is used to develop products for the design and testing of cpds useful for treating or preventing conditions associated with beta-amyloid psptide, esp. Alteiner's disease.

                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel non-human transgenic mammal or mammalian embryo having integrated within its geneme, a test on opposition expendence of sequence comprising at least object the test of the sequence comprising at least object the test of the sequence comprising at least object the test of the sequence of the variant in skin. The product of the invention is useful as a model for the study of disease with the aim of improving treatment, to related to a monotomer that drives expression of heterologous accessory of the study of disease with the aim of improving treatment, to related to a model for a maintenance in the development of a composition or omposition for the development of a composition or composition affective for the prevention or treatment of an expectation of composition effective for the prevention or treatment of an abnormal or unwanted phenotype, and for screening or identifying a compound or composition effective for the prevention or treatment of inflammatory skin diseases selected from diseases consisting of epidernal composition states and the testing of experiments of the province of the composition of the composition of the invention is also useful as model for further studies of itch mechanisms and the testing of extension of the invention is also useful as a model for further studies of itch mechanisms and the testing of extension of the invention as also useful as a model for further studies of itch mechanisms and the testing of extension of the invention as also useful as a model for further studies of itch mechanisms and the testing of extension of the invention as also useful as a model for further studies of itch mechanisms and the testing of extension of the invention as also useful as a model for further studies of itch mechanisms and the testing of the transgenic means and embryon and is useful to the development of the transgenic means at described in the invention.
                                                                                                                                                                                                                             Query Match

This invention describes a novel non-human transgenic mammal or mammal and combryon baving integrated within its genome, a heterologous mucleotide sequence comprising at least a significant part of a nucleotide sequence (coding for a stratum content that drives expression of heterologous scee or its variant; and in the product of the invention is useful as a model of or its variant in skin. The product of the invention is useful as a model of commetic or a planmaceutical formulation, for development or treating of a commetic or a planmaceutical formulation, and for the development of a commetic or a planmaceutical formulation, and for the development of a commetic or a planmaceutical formulation, for development or treating of a composition material production of the treating of a composition production effective for the prevention or treatment of an examination or unwanted plannitype, and for acreening or dentifying a compound or composition effective for the prevention or treatment of the hyperkeratoois, acanthosis, epidermal inflammation, dermal inflammation, composition and compositions of the invention is also useful case with epidermal typerkeratoois. The mammal of the invention is also useful case a model for further studies of the mechanisms and the resting of potential compounds and compositions for relieve to traitous skin diseases white epidermal is a compound. This evention is a compound on the section of the control of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SCCE; human; stratum corneum chymotryptic enzyme; kallikrein 7; serine protease; transgenic mammal; skin; skin disease; skin concer; hyperkeratosis; acanthosis; epidernal inflammation; pruritus; atopic dermatitis; eczema; acne; itch; KLK7; enzyme.
